Eriez® Electromagnetic Screeners Offer Dependable Material Separation at an Affordable Price

Erie, Pa.— [Eriez Electromagnetic Screeners](#) reliably size, scalp or de-dust dry bulk solid materials. These linear screeners are available in a variety of drive designs to meet customers' specific application requirements.

Eriez' Electromagnetic Screener B and C models are well suited for fine material separations. These high frequency, 3,600 vibrations per minute (3000 VPM @ 50 Hz) and low amplitude, .060" (1.5mm) units are ideal for dedusting and other fines mesh (4 to 200 mesh) separation. Models are also available for Class II, Div. 1, Group F and G environments.

Eriez Patented High Deflection Electromagnetic Screeners have all the advantages of an electromagnetic design with the added benefit of high amplitude. Operating at a fixed 1,800 vibrations per minute and approximately .1875 amplitude, HD models offer the nearly maintenance-free operation of Eriez' electromagnetic design with high amplitude, similar to a mechanical screener. The HD models' very flexible design makes these units suitable for a wide range of applications.

For more information, contact Eriez and request brochure VB-3709 or visit www.eriez.com.

Eriez is recognized as world authority in advanced technology for magnetic, vibratory and inspection applications. The company's magnetic lift and separation, metal detection, x-ray, materials feeding, screening, conveying and controlling equipment have application in the process, metalworking, packaging, recycling, mining, aggregate and textile industries. Eriez manufactures and markets these products through ten international facilities located on six continents. For more information, call toll-free (888) 300-ERIEZ (3743) within the U.S. and Canada. For online users, visit www.eriez.com or send e-mail to eriez@eriez.com. Eriez World Headquarters is located at 2200 Asbury Road, Erie, PA 16506.
